(54) DYNAMIC PARTITION CONTROL SYSTEM

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a dynamic partition control system with which plural pieces of partition information can be dynamically switched during system operation.

SOLUTION: This system is provided with a switching request factor part 1 for generating the factor of a partition switching request, indicator part 3 indicating a switching request flag corresponding to that switching request and one under operating at present of plural pieces of partition information 5a in a disk part 5, loader part 4 for managing and loading the information quantity of partition information 5a, and system operating area part 6 having a system operating area actually under operating. At a partition control part 2, reception processing is performed corresponding to the factor generation of the partition switching request, that switching request is instructed to a designated area among system operating areas while being matched with any partition information corresponding to that switching request, and the partition information 5a is dynamically switched and controlled.
